Giving Tuesday Now is TODAY!

How We're Equipping Vulnerable Populations During the Coronavirus Pandemic

INMED’s mission always has been to build pathways for vulnerable children, families and communities to achieve well-being and self-reliance. At no time has this mission been more critical than now. Which is why we’re asking for your support on #GivingTuesdayNow, a new global day of giving to promote COVID-19 relief efforts.

Why is your gift so important? Children who rely on school meals for regular sustenance go hungry when schools are closed. Low-income parents struggle for basic essentials when they’re laid off. And it’s hard to wash your hands when you have no access to running water or soap.

That's what our program participants are facing, and why our teams are focused on helping them survive COVID-19 and thrive in its aftermath.

In the United States

INMED USA is coordinating educational and technology resources for disadvantaged children without access to home computers or Wifi. Our family support specialists continue to connect virtually with families under enormous stress and at risk of child abuse, and we’re distributing donations of food,
diapers, hygiene products and other essential supplies to families living on the brink.

In South Africa

INMED South Africa is developing and distributing alternative education and resources for our Health in Action students to help them stay healthy and fit while in home quarantine and prepare them for the "new normal" when they return to school. Our school and community aquaponics systems are providing fresh vegetables and fish for vulnerable families.

In Brazil

Our Health in Action team is working with municipal officials in Pombos and Tucumã to fund and distribute food and hygiene kits for families in dire need. Thanks to a grant from the Mondelēz International Foundation and a crowd-funding campaign by our INMED Parcerias Para Crianças staff, we’re getting food and supplies to many children who have not had regular meals since schools closed.

In Peru

INMED Andes is sharing new sanitizing guidelines for high-touch medical equipment so that newborns with jaundice can safely continue to receive critical screening, diagnosis and treatment via our Bilikit™ project. This revolutionary trio of portable technologies is improving jaundice care in remote and low-resource regions.

In Jamaica

INMED Caribbean is enhancing our INMED Aquaponics™ online training platform for local food
production, climate-change resilience and sustainable income generation, while developing a fully virtual training program until in-person gatherings resume. The systems we built in Clarendon recently are already providing food security for vulnerable communities.

Our staff has demonstrated remarkable creativity in pivoting quickly to continue serving our participants in new ways. We couldn’t do it without supporters like you, whose donations make that critical flexibility possible as we work to give every child the best possible chance for health and opportunity—even in the midst of crisis.

Please consider donating to INMED Partnerships for Children TODAY during #GivingTuesdayNow
